

Kube-bench Demo Guide

A beginner-friendly hands-on demonstration of Kube-bench for Kubernetes security auditing.

Objective

Run Kube-bench against a Kubernetes cluster and review CIS Benchmark compliance.

Prerequisites

Linux system, Kubernetes cluster, kubectl access, and admin permissions.

Step 1

Verify cluster access using 'kubectl get nodes'.

Step 2

Download the official job.yaml from the Kube-bench GitHub repository.

Step 3

Deploy the job with kubectl apply -f job.yaml.

Step 4

Wait for the pod to complete and collect logs.

Step 5

Review PASS, FAIL, WARN, and INFO findings.

Step 6

Save the report for compliance and auditing.

Step 7

Investigate and remediate failed checks.

Cleanup

Delete the Kube-bench job after testing.

Presentation Script

Explain how Kube-bench validates Kubernetes configurations against the CIS Benchmark and helps improve security posture.

Quick Commands

kubectll get nodes

kubectll apply -f job.yaml

kubectll get pods

kubectll logs POD_NAME
